

# Cedus - An Ubertas Consulting AWS Case Study

## The Customer

Cedus are specialists in agile strategy execution, helping align organizational mindset and providing the analytical framework that empowers businesses to make better decisions. Their business tool, "Invest", provides a fully bespoke, agile model that can be used to both set strategy and drive delivery on-site or remotely.

## The Challenge

Having built the AWS solution themselves over the last six years using infrastructure-as-code principles, the development team and John, Cedus CTO wanted to gain outside insight into the architecture to learn where possible improvements could be made.

## The Solution

Ubertas Consulting set out to complete an AWS Well-Architected Review on the Cedus solution. Starting with an initial workshop, Ubertas covered the six Well-Architected Pillars, Ubertas assessed the security, reliability, performance, operations, cost and sustainability, producing a report showing how the solution marked against best practice. Following the review, Cedus and Ubertas spent three days performing remediation tasks on the AWS environment.

Over the course of three days, Ubertas completed a deep-dive assessment into the security and audit controls already in place, improving security posture and refining controls, work to improve robustness and resilience of the services by introducing more automation to deployments, as well as work to expand monitoring and alerting across the AWS estate.

If you would like to learn more about Well-Architected and book in a review of your AWS workload, please visit the link below or contact us.

**"** Working with Ubertas was a straightforward process and a financial no-brainer. After the initial assessment, having a dedicated AWS expert backed by a team of professionals for 3 days to work through our main challenges saved us many times that in researching the often complex AWS service offerings to find the best ones to suit our needs. We ended the process in a more confident position having had our systems confirmed as being flexible, robust and secure. We'll be in touch with Ubertas again to repeat the process and continue our never ending journey to improving our systems as the company grows. **"**

**John Stephenson**  
CTO at Cedus
