

# Ubertas Consulting .NET Application Containerization Consulting Offer

## Overview

Looking to modernise your Windows application? Maybe you have heard about Containers but thought it to disruptive to take the next step? AWS has a range of services, ECS, EKS and Fargate, so where to start?

The AWS Windows Modernisation Program assists customers to evaluate their specific options for running containers and help migrate their .Net applications to a cloud native architecture.

When customers modernize their applications with AWS, they benefit from rapid innovation, increased cost savings, improved security and greater flexibility.

## Modernizing Windows Workloads with AWS

Organisations can better understand their Containerization options through the Modernisation Viability Assessment (MVA). This is a detailed analysis of your options, 100% funded by Amazon and Ubertas Consulting to ensure there is no cost to starting your journey.

Through this assessment customers can plan a path to modernizing their applications in the AWS cloud.

## Benefits

Reduce costs by consolidating your cloud resources and go further by leveraging a serverless architecture

Improve deployment agility through a consistent, reliable and frictionless route from development to production

Build in security throughout the lifecycle of containers operating within a Well Architected environment for your workload

Leverage AWS innovations in container technologies with Amazon EKS, ECS and explore serverless with Fargate.

## Customer References

Aligning to the principles of Well Architected, we help our customers modernise their cloud infrastructure ensuring that their applications are resilient, secure and cost optimised in supporting their business.
