

LEAVE YOUR VMWARE WORRIES BEHIND WITH AWS

Concerned about the financial implications presented to your organisation by VMWare's transition from perpetual to subscription-based licensing? Approaching a hardware refresh cycle which combined with new licensing rules, challenges the cost-effectiveness of remaining on-premises? Are you ready to take the next step into Public Cloud, but the potential re-engineering effort and migration work seems too daunting? Let us put your mind at ease.

We're Ubertas Consulting, an Advanced AWS Consulting Partner specialising in Migration, with a sole focus on Amazon Web Services. We commonly see our clients wrangling with these exact VMWare challenges, giving us a unique breadth of knowledge and expertise to help you realise VMWare Freedom from commercial hypervisor platforms- without compromising on the reliability and performance you have come to expect of your workloads, and without requiring an extensive re-engineering. We are here every step of the way.

TRANSITIONING WITH EASE

AWS Application Migration Service (MGN) allows organisations to seamlessly migrate their existing VMWare workloads into the native AWS ecosystem, enabling them to rapidly take advantage of the availability, performance, scalability and security associated with public cloud, without any re-engineering effort, and minimal migration time. Our experts work side by side with you throughout the process.

BENEFITS

-  **Reduced Cost** - Negate the costs of hardware refresh and hypervisor licensing by paying only for your what you use, when you use it
-  **Increased Resilience** - AWS EC2 can deliver >99.99% uptime SLA by allowing mission-critical workloads to be geographically distributed to mitigate against infrastructure failure
-  **Improved Scalability** - Scale resource with zero lead-time, enabling increased infrastructure utilisation and cost efficiency, whilst retaining the ability to scale to meet peak demand
-  **Reduced Overhead** - Realise operational efficiencies by negating the need for hardware maintenance, and automating patching; technical teams can invest time into improving products for Customers rather than operational tasks

THE HELP YOU'RE LOOKING FOR

With our unmatched technical expertise, Ubertas Consulting can help you realise VMWare freedom and take the first step to a Cloud-native future.

Step One : Review

An assessment of the current virtualised ecosystem from technical and commercial perspective. Recommendations for migrating your databases to Amazon Web Services.

Step Two: Plan

Priced options for your VMWare estate running on AWS along with a recommended migration path to enable the modernisation journey.

Step Three: Build

An architectural representation of your current VMWare environment operating on AWS in accordance with the AWS Well-Architected Framework covering security, performance, reliability, operations and cost efficiency
